

# Introduction To CUBE 2023 (7)

Ohio DOT

Prepared exclusively for Ohio DOT and Ohio MUG meeting  
attendees not for re-distribution.

**Bentley**<sup>®</sup>  
**Advancing Infrastructure**

© 2022 Bentley Systems, Incorporated

# Mobility Simulation

Thousands of professionals around the world rely on Bentley's mobility simulation software to understand the urban, metropolitan, regional, and national movement of people

**CUBE**

Predictive modeling and simulation of transportation

**EMME**

Multimodal transport planning

**LEGION**

Improving infrastructure for people

**DYNAMEQ**

Traffic simulation and dynamic traffic assignment

**CityPhi**

Mobility animation studio

**AGENT**

Advanced travel demand modeling

Prepared exclusively for Ohio DOT and Ohio MUG meeting attendees not for re-distribution.

# Disclaimer Statement

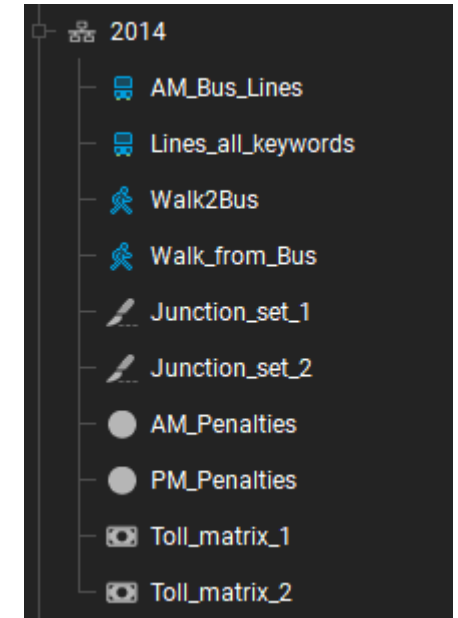

Release plans and timelines are forward-looking estimates and projections only. There can be no assurance that Bentley will be able to meet such estimates or projections by the dates specified, or at all. Do not make purchase decisions based on forward looking roadmaps.

# What is CUBE 2023 (formerly 7)?

- CUBE 2023
  - is a significant re-engineering of CUBE 6
  - takes the best ideas from CUBE 6 and built it on modern technology
    - Application flowchart
    - Scenario management
  - is built for handling larger data with better performance
  - uses modern data formats
  - is not an upgrade to CUBE 6
  - does not include updates to the modeling engine
    - Voyager\*, Avenue, Land, Cargo, Analyst Drive

# Database/Network

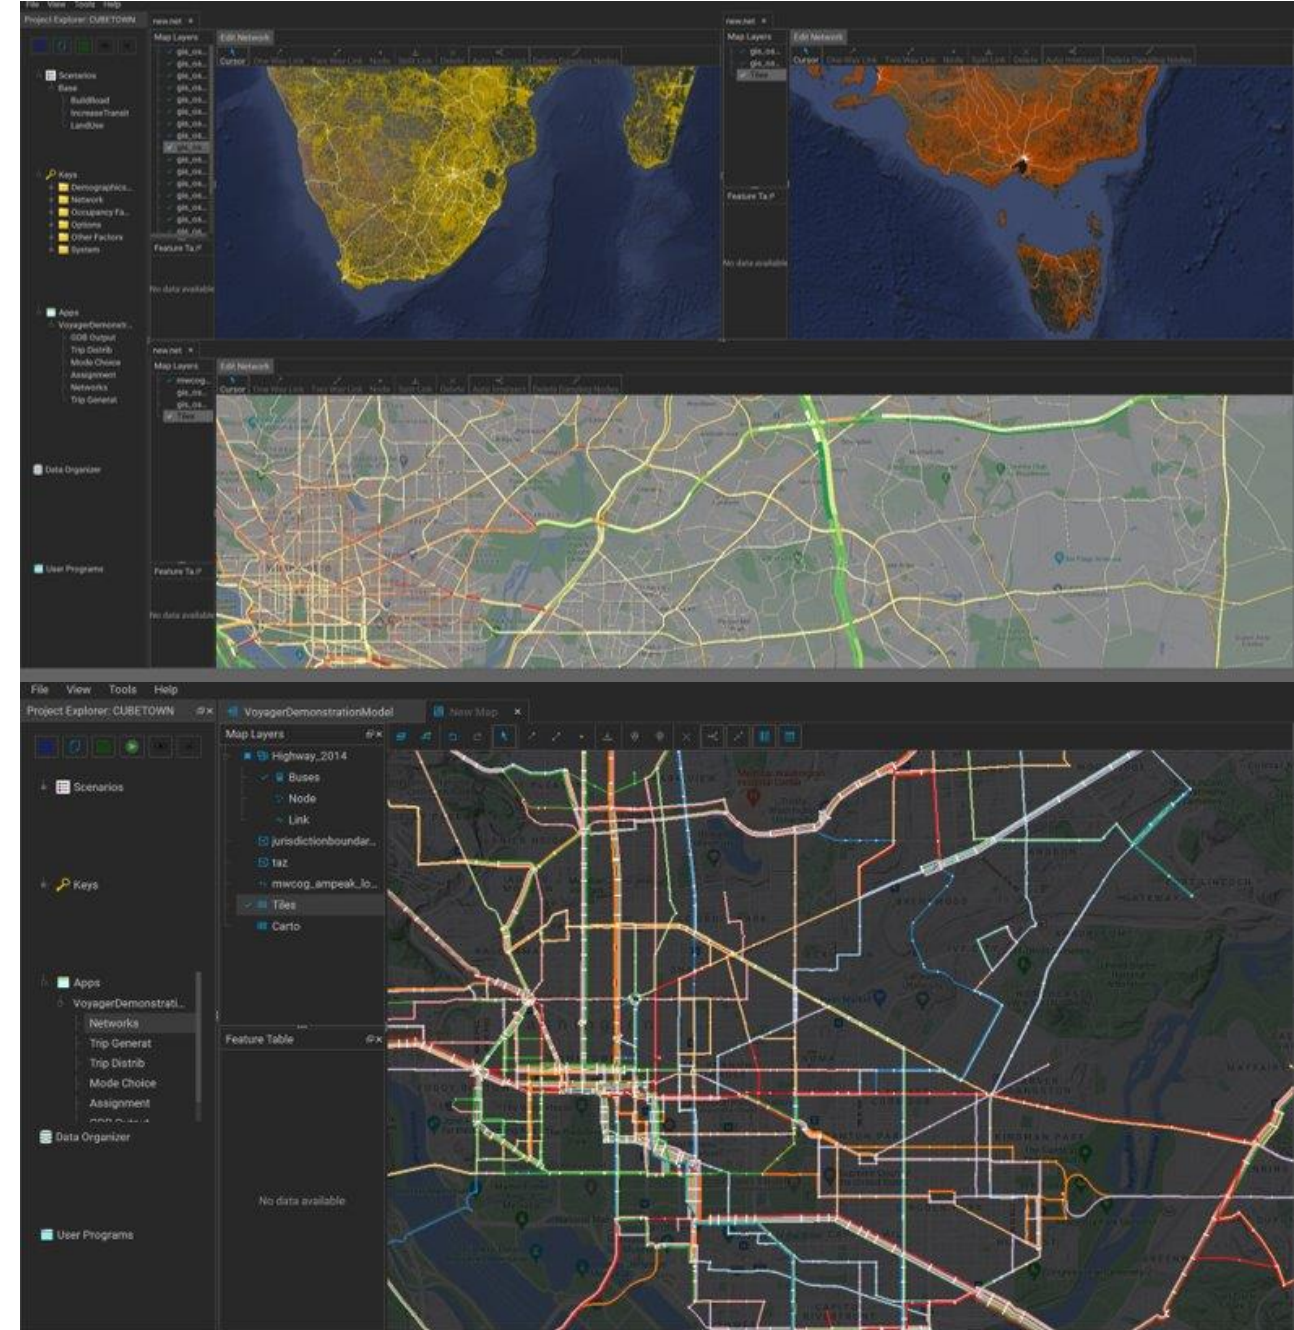

- Cube 2023 uses a new database format
- Synchronized network components
- Supports all network data
- Supports point/polyline/polygon feature classes
- Supports data tables

# GIS

- Not dependent on ArcGIS
- Built to handle large datasets
- Bing base maps by default
- Runs on GPU
- Supports powerful expressions
  - E.g., `__transitLineCountByNetwork[AM_Bus_Lines] > 0`

Prepared exclusively for Ohio DOT and Ohio MUG meeting  
attendees not for re-distribution.

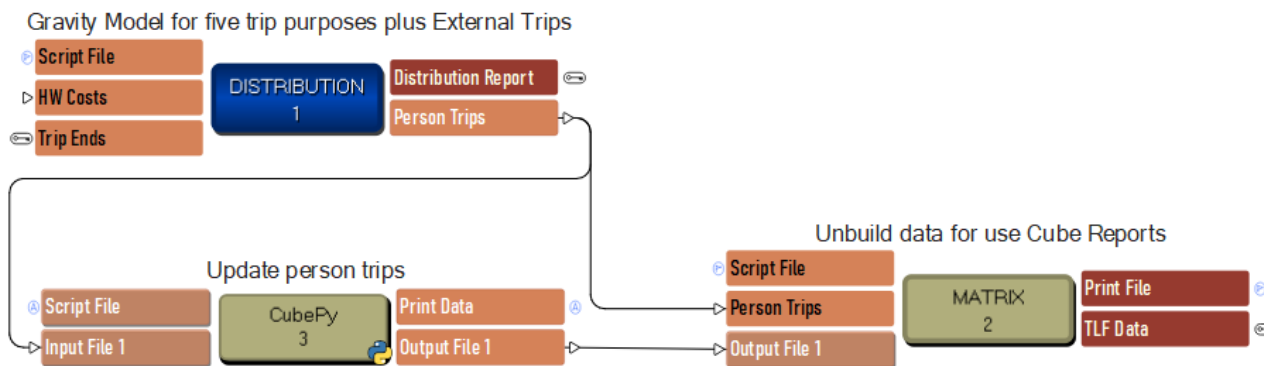

# CubePy

- Python API which provides powerful methods for network and matrix processing.
- GIS Network editor is based off CUBE API, any workflows/tasks you can achieve in the GIS editor, can be scripted using CubePy.
- Can easily integrate CubePy into their existing model applications (Voyager) through the built in CubePy program box.

```

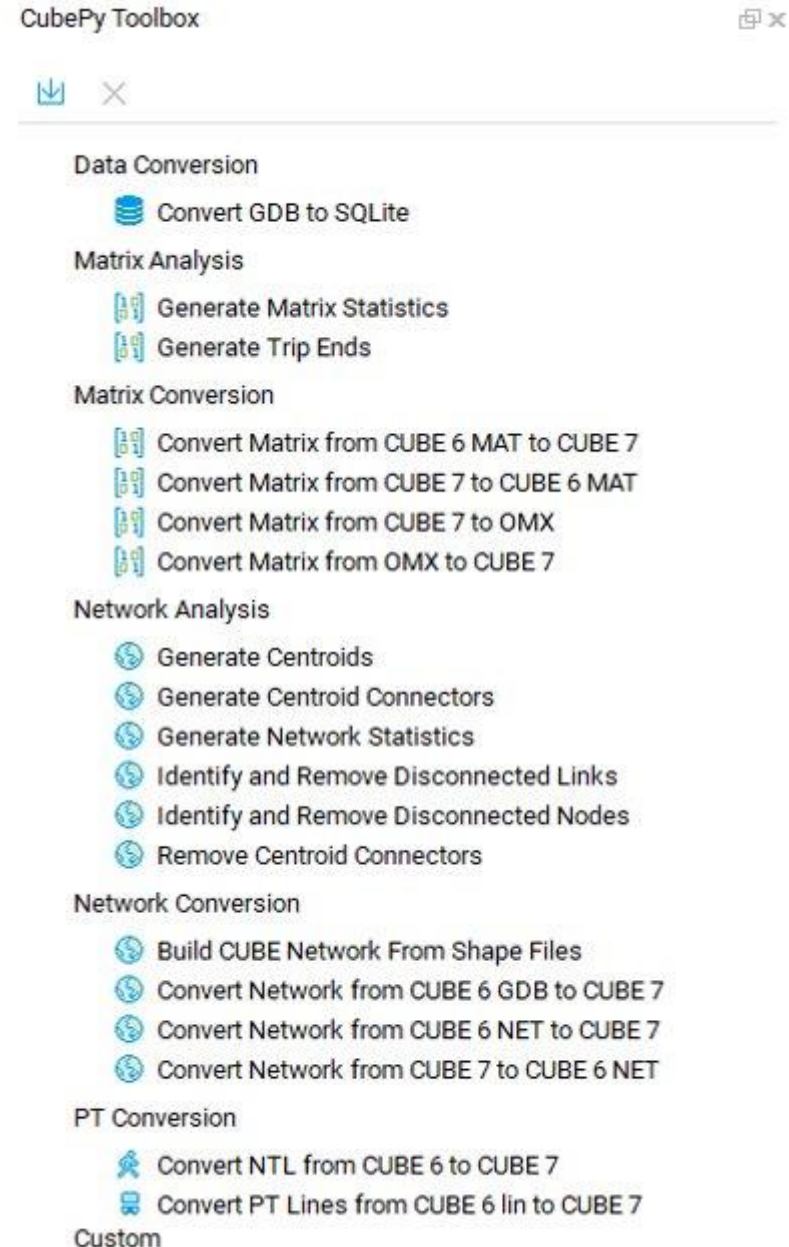

1 import os
2 import contextlib
3 import math
4 from pathlib import Path
5 import shutil
6 import cubeapi as cp
7
8 # This example takes an input Cube Database that has
9 # has been created previously and performs various
10 # operations on it. Note, it makes a copy of the
11 # original Spatialite file.
12
13 if __name__ == "__main__":
14     data_dir = f"{Path.home()}/data/cube7.test.data"
15     output_dir = "output"
16     source_db = f"{data_dir}/cube7_networks/jacksonville_cube@.sqlite"
17     network_name = "test_network"
18     link_count = 10000
19     working_db = f"{output_dir}/jacksonville_misc_processing_cube@.sqlite"
20
21     # copy the source db to a working db we will modify
22     with contextlib.suppress(FileNotFoundError):
23         os.remove(working_db)
24     shutil.copyfile(source_db, working_db)
25
26     # database already exists
27     db = cp.CubeDatabase(working_db)
28
29     # get the network names and list them
30     networks = db.getNetworkNames()
31     print("Networks: ")
32     for index in range(len(networks)):
33         print(f"{index + 1}: {networks[index]}")
34
35     # get the first network name
36     network_name = networks[0]
37
38     # We can find intersecting links for a geometry.
39     wkt = "LineString(-81.46262999978468448 38.677469999467989, -81.4546999998680298 38.67027999992210(4))"
40     # This returns a list of LinkGeometryEntry with "a", "b", and "wkt"
41     links = db.getLinkIntersectionForGeometry(network_name, wkt)
42     print("====> Finding links that intersect with the following geometry:")

```

# Click and Run tools

- Cube toolbox provides Click and Run tools to accomplish tasks without scripting
- Users can create their own tools to share with other users

Prepared exclusively for Ohio DOT and Ohio MUG meeting  
attendees not for re-distribution.

# Table Editor

- New table/matrix editor to handle large data
- Supports csv editing
- New matrix format based on the hdf5 format
- Support for SQL queries

Cube Voyager Demonstration Model

Prepared exclusively for Ohio DOT and Ohio MUG meeting attendees not for re-distribution.

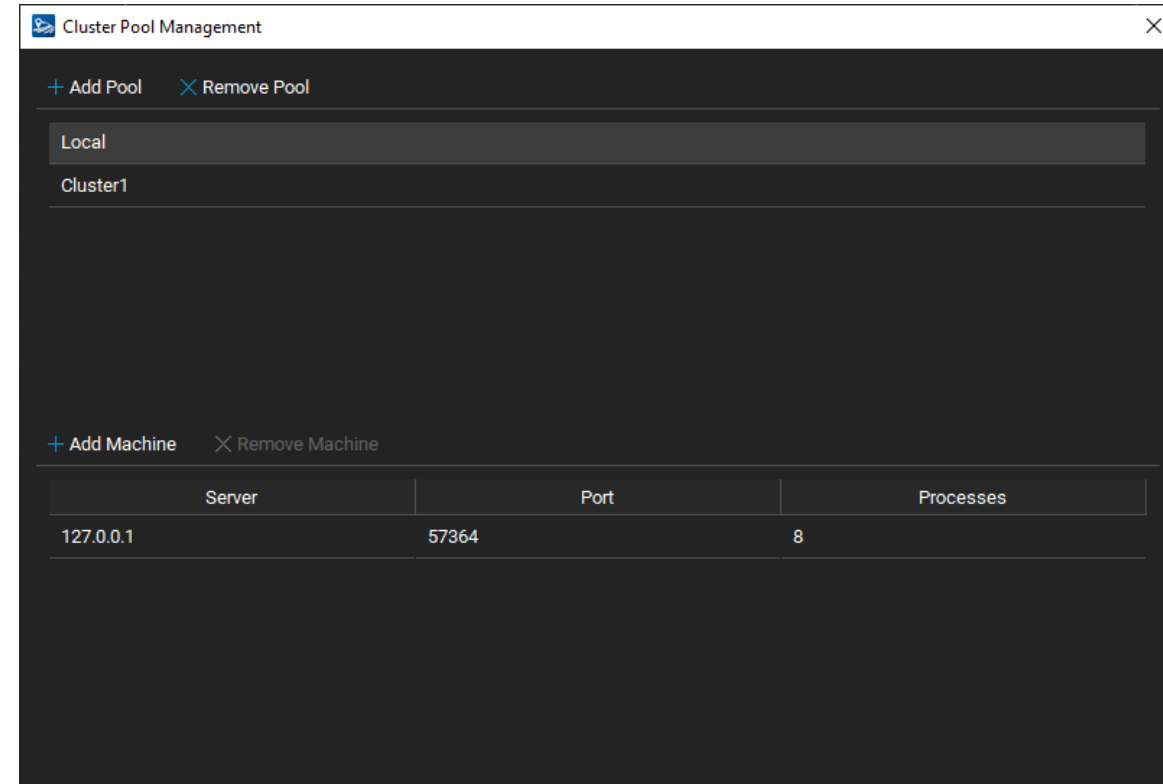

# Application Editor (Flow Chart)

- Application Manager has a new look and have more powerful visual capabilities such as:
  - Zooming / scaling,
  - Application navigation view
  - Ability to view the entire application group tree hierarchy and navigation
- Edit history and undo / redo
- Users will have more control over model design e.g., how far up a group hierarchy that an input file may be "public"
- Model run mode; AM will allow running of an application and all of its subgroups in a read-only view that highlights the currently running program and various statistics about the current run (similar to Task Monitor but more detailed)

# Cube Cluster

- Much greater usability and manageability
- Based on a robust client-server protocol system rather than file based inter-process communication
- Consolidated and centralized cluster node management
- Automatic determination of nodes to assign for a particular Multistep or Intrastep
- Ability to manage multiple CUBE Cluster compute pools from one interface / client (i.e., multiple model runs could be started and monitored from one user interface even

# Other improvements

- Multi version support
- Windows/tab management
- Relative file references to better support version control like Git
- JSON format application and project files (catalog files)

# Things to know

- CUBE 6 models must be converted to CUBE 2023
  - Catalogs/Applications
  - Network data
  - Cluster scripts
  - Pre/Post-Processing steps
- Built in tools available
- Junction/turn penalty GUI editor available for future release

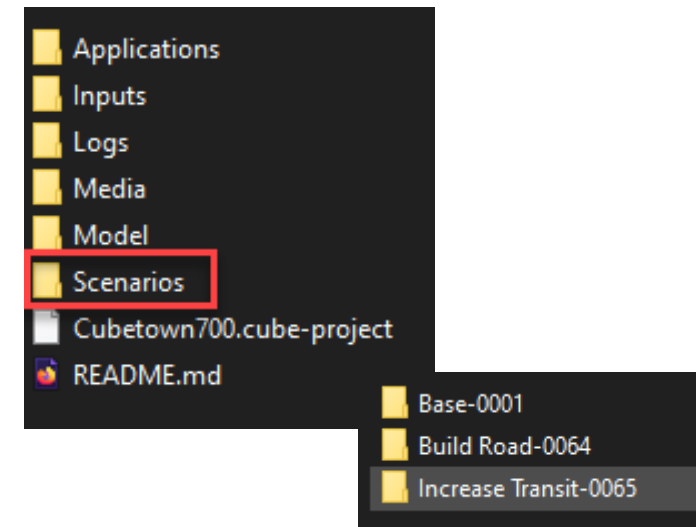

# Scenarios

- A flat folder structure with scenario code to identify scenarios

CUBE 6

CUBE 2023

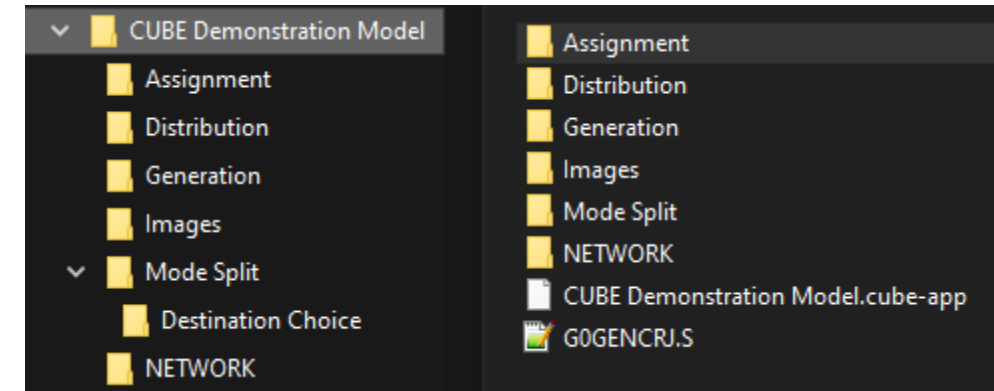

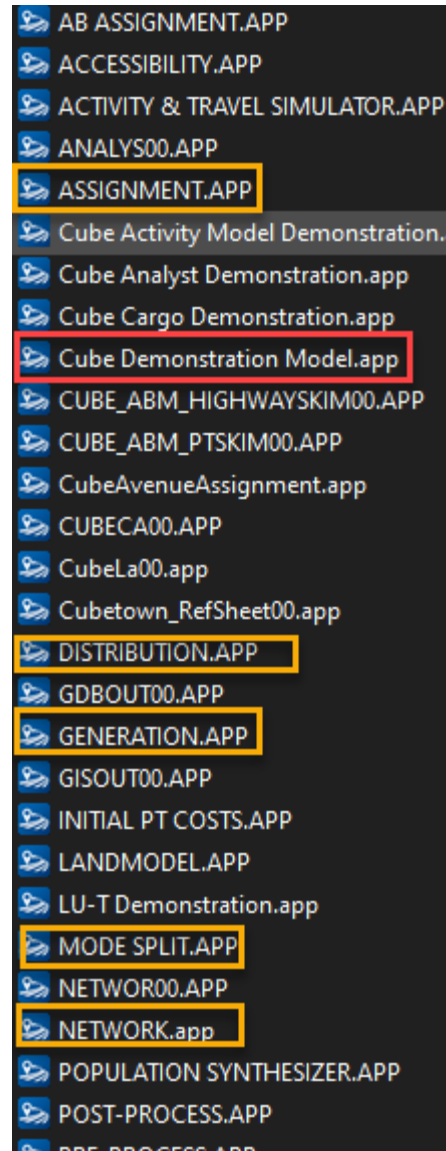

Prepared exclusively for Ohio DOT and Ohio MUG meeting  
attendees not for re-distribution.

# Applications/Groups

- Groups are entities inside applications and not a standalone application
- Individual folders for each application
- Individual folders to save group files (script/print) under each application folder

Prepared exclusively for Ohio DOT and Ohio MUG meeting attendees not for re-distribution.
